

Science

This week in science we completed our bean diaries. Our investigations showed that the beans we placed in the cupboard with no light and in the fridge with no warmth, did not grow at all. Each week we observed and recorded the changes to our beans. At first tiny roots were seen growing out of the bottom of the bean seed. Over the next few weeks the beans sprouted shoots, stems and leaves. We enjoyed observing the changes each week and recording our results in our diaries. On the final week of term, we took them home to plant in our gardens, wondering if a giant might visit us one day.

Homework

The children have made some wonderful homework this half term. It was wonderful to see lots of photographs taken at Garden Centres, woods, forests and lakes. The children used their investigation and identification skills to research the leaves, trees and plants they found on their visits. Using their creative skills children created fairy gardens and fairy homes for an Enchanted Woodland.
